

# Francis & Robertson Elementary Schools

T.F. Green Airport

## profile

The Jones Payne Noise Mitigation Group is serving as the Program Manager for the Rhode Island Airport Corporation (RIAC) School Sound Insulation Program for two elementary schools within the City of Warwick. The firm participated in the initial feasibility study that determined the eligibility of the facilities for FAA funding. The current contract involves managing the acoustical, architectural, mechanical & electrical, and hazardous materials consultants in the preparation of an Existing Conditions and Preliminary Design Report which outlines the recommended sound insulation treatment approach and proposed ventilation upgrades. The scope of services includes coordination with the Warwick Public Schools, the preparation of final design and bid documents, and construction management. The estimated cost of the recommended improvements is approximately \$800,000 for selected door and window replacements/upgrades, ceiling/roof reinforcement, and mechanical ventilation systems for all classrooms, assembly spaces used for teaching, library and office areas.
